

VOLCANO – M139 Mine Dispenser

ON **EVERY**
MISSION

FACT SHEET:

KEY FACTS:

- Operator controlled arming sequences, delivery speed, density, self-destruct times
- Volcano mounting kit can be integrated to varying vehicle platforms
- Four Launcher Racks, Dispenser Control Unit
- Minefield has a self-destruct time ranging four hours to 15 days

Capabilities/Characteristics:

- M139 Volcano system is a scatterable mine delivery system that dispenses up to 960 mines to create a terrain shaping obstacle of 120 meters by 1100 meters.
- The M139 Volcano system is an anti-vehicular Landmine Policy compliant capability.
- The Volcano system is a key Army terrain shaping obstacle capability anticipated for future operations.

Stakeholders:

- US Army, US Marines

Industry Partners:

- Northrop Grumman, Plymouth, MN
